Profit Potential Exists for Feeding Heifers

The Situation
Cow-calf producers in Idaho typically spring calve, graze on summer forage, wean and sale the calves in the fall. The best heifer calves are selected as replacements for the cowherd and the remaining heifer calves are sold with their steer herd mates. The heifer calves bring 7 to 10 cents per pound less than the steer calves. Reasons for the discount are that heifers in comparison to steers have lower average daily gain, less efficient feed conversion, higher cost per pound of gain, pregnancy risks, tradition and other factors.

Program Outcomes
One hundred twenty ranches from 4 states consigned 6,217 head of cattle (3,696 steers, 2,521 heifers) to the “A to Z Retained Ownership, Inc.” for the twelve years of feeding trials implemented in 1992-2004. Cattle performed similarly each year. Incoming value of cattle, feed costs, marketing date, feedlot average daily gain and price premium or discount based on carcass quality and conformity account for most of the variation in profitability among animals. Recent pricing grids reward production of lean quality carcasses.

Our Response
University of Idaho faculty developed an Idaho Total Beef education program with input from ranchers, bankers, feeders, packers and allied industries. Ranchers participate by enrolling a sample of their calves (5-50 head) in a feeding trial. The calves are preconditioned (weaned, vaccinated) on the ranch and delivered to Bruneau Cattle Company Feedlot. The feeding trial starts in November and ends in May when the finished cattle are processed at Tyson Fresh Meats, Boise. Owners receive feedlot, carcass and economic information on their calves.

Educational methods include: (1) rancher participation through ownership of cattle, (2) computer projection of anticipated performance, (3) monthly progress reports, (4) feedlot tour and update, (5) market reports, (6) paper hedges to track live cattle and futures prices, (7) individual animal, ranch and pen data, (8) performance and financial analysis, (9) packing house tour and carcass viewing, and (10) published reports and articles.

Objectives of this integrated resource management (IRM) program are to help ranchers: (1) broaden their knowledge of the whole beef industry, (2) gain feedlot, carcass and economic information on their own cattle, (3) investigate alternative marketing options, (4) identify variables that affect profitability, (5) compare heifer and steer performance, (6) manage risks, and (7) apply knowledge to their own ranch management.
steers and the feedlot and carcass performance and carcass prices.

The retained ownership program was determined a success. Surveys of the participants indicated a high level of satisfaction (96%) with the program. Producers classified the performance information as most useful in making the following decisions: 75% in fine-tuning ranch management, 63% in selection of bulls and replacement heifers, 63% in deciding to retain ownership of their calf crop as part of the marketing plan, 50% in enhancing the marketing of their calf crop.

Producers saw enhanced profitability of cattle in retained ownership during 2004 for the 119 steers and 152 heifers enrolled in the program. Steers averaged an additional $55.22 per head and heifers averaged an additional $88.16 per head over what would have been generated by selling weaned calves in the fall of 2003.

**The Future**

Plans are to continue the program. Each year, participants evaluate the program and suggest changes and interest emphasis. Educational programs are designed to address those interest topics and current situations. The 2004-05 feeding trial is about to start. With strong cattle prices during the fall of 2004, we anticipate that numbers will be down.

**Participating Faculty**

Gordon Keetch, Adams/Washington Counties
Scott Jensen, Canyon County
Neil Rimbey, Range Economist
Benton Glaze, Beef Specialist
Will Cook, Gem County
Eric Morrison, Owyhee County
Pat Momont, District II Director
Jim Hawkins, Custer County
Jim Church, Idaho County
Shannon Williams, Lemhi County
C. Wilson Gray, Economist
