Idaho’s Noxious Weeds

9TH EDITION
IDAHO’S NOXIOUS WEEDS
9TH EDITION

by Timothy Prather, Sandra Robins, and Don Morishita

Technical information and assistance was provided by Daniel Safford and Stephen Cox at the Idaho State Department of Agriculture.

This handbook was prepared in cooperation with the Idaho State Department of Agriculture, Bureau of Land Management, and the United States Forest Service.

This handbook is valid as to its list of noxious weeds as of the date of publication. However, the list of Idaho’s noxious weeds is subject to change. Please contact the Idaho State Department of Agriculture or go to invasivespecies.idaho.gov/plants to ensure that the list set forth in this handbook is correct.

University of Idaho Extension
Moscow, Idaho
THE AUTHORS—Timothy Prather, Extension Weed Specialist; Sandra Robins, former Taxonomist; and Don Morishita, Extension Weed Specialist; all in the University of Idaho Department of Plant, Soil, and Entomological Sciences.

The authors gratefully acknowledge the contributions of the authors of previous editions: Larry Lass, Robert Callihan, and Timothy Miller.

Introduction

IMPACTS TO OUR NATURAL SYSTEMS
Idaho’s noxious weeds include species that make significant modifications to the landscape. Purple loosestrife can change stream velocity, which increases siltation. Species such as spotted knapweed can accelerate soil erosion. Salt cedar deposits salt on the soil surface from below-ground alkaline water, which leads to the elimination of all salt-sensitive species. Areas within the Czech Republic are seeing reductions in native species because they have lost their pollinators to the nectar of Policeman’s helmet, another Idaho noxious weed. Bohemian knotweed is creating monocultures along many Idaho streams, where it lacks the bank stabilizing root system of our native riparian species.

WHAT ARE NOXIOUS WEEDS?
Idaho’s noxious weeds are plant species that have been designated “noxious” by law in the Idaho Code (title 22, chapter 24, “Noxious Weeds”). The weed law is implemented using administrative rules. These rules are contained in IDAPA (Idaho Administrative Procedures Act) 02, title 06, chapter 22, “Noxious Weed Rules.” Idaho’s noxious weed law is online at https://legislature.idaho.gov/statutesrules/idstat/Title22/T22CH24/. The administrative rules are online at https://adminrules.idaho.gov/rules/current/02/index.html.

CATEGORIES OF NOXIOUS WEEDS
The administrative rules put noxious weeds into categories that can affect how they are managed. Within this guide, each species is labeled as to its category within the administrative rules.

Statewide early detection and rapid response (EDRR). Plants in this category must be reported to the Idaho State Department of Agriculture (ISDA) within 10 days after being identified at the
University of Idaho or by another qualified authority approved by the ISDA director. Eradication of these weeds must begin in the same season they are found.

**Statewide control.** Plants in this category may already exist in some parts of the state. In some areas of the state control or eradication is possible, and a plan must be written that will reduce infestations within 5 years.

**Statewide containment.** Plants in this category exist in the state. New or small infestations can be reduced or eliminated, while established populations may be managed as determined by the weed control authority, which usually is the county weed program.

**Prohibited genera.** Plants in this category are prohibited from the state and may not be sold or moved within the state. There may be species found in Idaho that are within the prohibited genera. Those populations must be controlled or eradicated, following a written control plan to reduce populations within five years or to eradicate. The plan must be available to the Idaho State Department of Agriculture upon request.
WEED IDENTIFICATION
Submit weeds and suspected weeds to the Erickson Weed Diagnostic Laboratory at the University of Idaho:

1. **If you know the weed**, report it. If a weed has not been reported in your area before, please send us location information and either the plant itself or pictures that would allow us to identify the plant. We need to map Idaho’s weeds to plan our strategy. Your reports are important.

2. **If you don’t know the plant**, request identification.

**What to send.** Plants are identified by flowers, fruits, seedlings, leaves, rosettes, stems, roots, and habitat. Send plants that have as many of these identifiers as possible. Several plants are better than one.

**How to send.** Place the plant specimen in a closed plastic bag between dry paper towels. Do not press on the plant or add moisture to the bag. Store the bag in a refrigerator until mailing or bringing it in. If you are mailing your specimen, mail it early in the week so it won’t sit in a mailbox over the weekend.

**Where to send.** Erickson Weed Diagnostic Laboratory, College of Agricultural and Life Sciences, 875 Perimeter Dr MS 2339, Moscow ID 83844-2339. You may also bring specimens to your nearest University of Idaho Extension office or to your county weed superintendent’s office.

The laboratory’s taxonomist identifies hundreds of plants each year, some of which are new to the region or state. The service is free. Contact the UI Extension educator in your county for submission forms.
HOW TO USE THIS GUIDE
The weeds in this book are arranged alphabetically by weed common name. For weeds that have more than one common name, the book uses the name in Idaho’s official noxious weed list.

The description for each weed includes the following:

**Weed name and family.** Common and scientific names for the weed and its plant family.

**Category.** The official category of an Idaho’s noxious weed—prohibited genera, early detection rapid response (EDRR), containment, or control. The category appears in a color-coded bar directly below family name. Maroon (reddish) signifies EDRR, blue containment, and gold control and prohibited genera.

**Poison.** A poison symbol (skull and crossbones) in the category bar denotes weeds that are poisonous.

**Background.** A summary of important information about the weed, including an indication of the distance seeds or other plant parts move. This dispersal distance can help you determine the size of the treatment area. This section also contains the length of time seeds survive.

**Description.** Life history, height, and other overall features. Subsections follow that describe roots, leaves, flowers, and seeds.

**Habitat.** Where the weed is most likely to occur.

**Similar plants.** Plants that can be confused with the weed and ways to distinguish among them.

**Idaho distribution map.** Shows counties in which the weed was present in the ISDA database as of January 2010 and in the continually updated North American Vascular Flora Database by John T. Kartesz, Biota of North America Program.
**Photographs.** Captions lead you to important distinguishing features of each weed.

**Leaf shape.** The general outline of the weed’s leaves, minus leaf margin detail (such as a saw-like leaf edge) appears at bottom right. If a plant has more than one leaf shape, both are included, with “R” designating a rosette leaf and “S” a stem leaf.

Black henbane
*Hyoscyamus niger*
Solanaceae, the nightshade family

**BACKGROUND**
- Native to the Mediterranean; introduced as an ornamental and medicinal plant
- Pungent odor
- Toxic to humans and animals
- Reproduces by seed
- Disperses short distances (less than 5 yards)
- Seed longevity not reported

**DESCRIPTION:** Annual or biennial up to 3 feet tall

**Roots:** Thick, fleshy taproot

**Leaves:** Alternate, gray-green, oblong to lance-shaped, coarsely toothed to pointed pinnately lobed with prominent veins, covered with short glandular hairs

**Flowers:** Funnel-shaped, 5-lobed, off-white with deep purple centers and veins; solitary in leaf axils; flower stem coiled

**Seeds:** Egg-shaped capsule contains numerous brown to gray, flattened, and deeply pitted seeds

**HABITAT:** Roadsides, fields, and disturbed areas

**SIMILAR PLANTS:** None
Flowers have deep purple centers and veins. Seedling leaves are oblong to lance-shaped with stalks. Leaves are coarsely toothed to shallowly lobed and pubescent. Calyaxes on fruiting stem contain the seed capsule.
Bohemian knotweed  
*Polygonum X bohemicum*  
Polygonaceae, the buckwheat family

**CATEGORY:** Control

**BACKGROUND**
- Introduced from Asia as a garden ornamental
- Hybrid between giant and Japanese knotweeds
- Reproduces by rhizomes and stem fragments, occasionally by seed
- Disperses by stem and root fragments moving in water
- Crowns live more than 5 years, seeds at least 4 years

**DESCRIPTION:** Clumping perennial with hollow stems; up to 12 feet tall

**Roots:** Long creeping rhizomes up to 18 feet long

**Leaves:** Egg-shaped with pointed tip; leaf base flat across to heart-shaped; twigs zig-zag; purple-spotted stems with sheathing membranous stipules

**Flowers:** Erect, upright panicle contains numerous small white flowers

**Seeds:** Glossy; brown to dark brown

**HABITAT:** Disturbed moist sites and wetland and riparian areas

**SIMILAR PLANTS:** Japanese knotweed flowers are drooping; giant knotweed has larger, more elongated leaves with a heart-shaped base
Flowers tend to be erect, not drooping. Leaf base is slightly to very heart-shaped.
Brazilian elodea
*Egeria densa*
Hydrocharitaceae, the waterweed family

**CATEGORY:** EDRR

**BACKGROUND**
- Introduced from South America for aquarium use
- Forms dense stands or subsurface mats
- Reproduces vegetatively by stolons and stem fragments; does not develop stem turions (specialized buds)
- Disperses by means of floating fragments
- Stolon longevity not reported

**DESCRIPTION:** Submerged aquatic perennial with slender branched stems

**Roots:** Slender; certain nodes develop roots on the stems

**Leaves:** Linear to oblong; \(\frac{3}{4} - 1\frac{3}{4}\) inch long and \(\frac{1}{8} - \frac{1}{4}\) inch wide; margins finely toothed; in whorls of 4–6

**Flowers:** 3 white petals and yellow center; flowers float at the water surface, attached at the base of the leaf whorls with threadlike flower stalks 1–4 inches long

**Seeds:** Not produced in western U.S.

**HABITAT:** Canals, rivers, ponds, lakes, and reservoirs

**SIMILAR PLANTS:** Common elodea has 2–3 leaves per whorl; hydrilla has 5–8 whorled flowers in leaf axils; Brazilian elodea is typically larger
Flowers float on water. Leaves occur in closely spaced whorls of 4–6 along the stem.
Example: Tagasaste, Escabon or Tree Lucerne

Chamaecytisus prolifer (also called Cytisus proliferus)
Fabaceae, the pea family

**CATEGORY:** Prohibited genera

**BACKGROUND**
- All brooms are prohibited; this is one of several invasive broom species
- Native to the Canary Islands and used as a forage shrub; now found in California
- Produces at least 6000 seeds per shrub
- Can survive winter temperatures above 5°F

**DESCRIPTION:** Evergreen perennial shrub up to 12 feet tall, living at least 25 years

**Roots:** Deep, branched taproot

**Leaves:** Dark green, compound with 3 ovate to oblong leaflets that are up to 2.5 inches long; silky pubescence on undersides of leaves; very young plants lack hairs

**Stems:** Sometimes stem has minor ridges but not 5-angular

**Flowers:** Creamy white pealike flowers in loose, red-pedicelled umbels along the stems

**Seeds:** Pods are black, narrow at the base, oblong, hairy and flattened, 2 inches in length; 10 seeds per pod, brown to black and oval shaped

**HABITAT:** Well drained soils, disturbed sites such as pastures, forest borders, lawns, and roadsides

**SIMILAR PLANTS:** Other brooms lack 5-angular stems; gorse has thorns

*Entire genus is prohibited. This example species is one most likely to be encountered.*
White pealike flowers on red pedicels in loose umbels. Seed pods are black, oblong, hairy and flattened; seeds are brown to black and oval.
Brooms • Genus: *Cytisus*

**Example: Scotch broom**  
*Cytisus scoparius*  
Fabaceae, the pea family

**CATEGORY:** Prohibited genera

**BACKGROUND**  
- Native to Europe; introduced as a landscape ornamental and planted for erosion control  
- Toxic to humans and livestock  
- Seeds disperse up to 30 feet  
- Seeds remain viable at least 3 years, likely much longer

**DESCRIPTION:** Perennial shrub up to 10 feet tall with yellow, pea-like flowers

**Roots:** Deep, branched taproot

**Leaves:** Mostly compound with 3 leaflets, sometimes a single leaf on stems; stems dark green and strongly 5-angled or ridged

**Flowers:** Pale yellow to maroon-red, pea-like, 1-inch long, singly or paired in leaf axils

**Seeds:** Pods flattened, dark brown, smooth, hairy along the margins, to 2 inches in length; seeds brown to black and oval shaped

**HABITAT:** Pastures, borders of forest, lawns, roadsides, and disturbed sites

**SIMILAR PLANTS:** Other brooms lack 5-angled stems; gorse has thorns

*Entire genus is prohibited. This example species is one most likely to be encountered.*
Yellow pealike flowers appear on dark-green, strongly angled stems with tiny leaves. Seedling leaves have 3 leaflets. Stem edges are strongly angled. Seed pods are flat with hairy margins.
**Example: French broom**

*Genista monspessulana*

Fabaceae, the pea family

**CATEGORY:** Prohibited genera

**BACKGROUND**
- All brooms are prohibited; this is one of several invasive broom species
- Native to the Azores and surrounding Mediterranean region
- Introduced in mid-1800s as an ornamental
- Similar to Scotch broom, foliage and flowers toxic to some animals
- Seeds attract ants, which aid in dispersal
- Seeds remain viable at least 5 years in soil

**DESCRIPTION:** Upright shrub, usually <10 feet tall, but up to 16 feet tall

**Roots:** Deep, branched taproot

**Leaves:** Compound with 3 leaflets, oblong to ovate, mostly 0.4 to 0.8 inches long, with sparse to dense flattened short silvery hairs

**Stems:** Erect, dense, green, and covered with many silver, silky hairs; round with 8–10 prominent ridges

**Flowers:** Usually bright yellow, pea-like, 0.2 to 0.3 inches long, in clusters of 4 to 10 flowers

**Seeds:** Pods contain 3–8 round to oval, shiny, smooth, black seeds ~0.07 to 0.1 inch long

**HABITAT:** Open, disturbed sites, such as logged or burned areas, roadsides, pastures and marginally disturbed grasslands; intolerant of heavy shade; drought resistant

**SIMILAR PLANTS:** Other broom species including Scotch, Spanish, Portuguese broom. Some cultivated French broom hybrids also may exist. Use prominent stem ridges to distinguish from other brooms.

*Entire genus is prohibited. This example species is one most likely to be encountered.*
Yellow pea-like flowers on round stems with 8–10 prominent ridges. Leaflets have short, silvery hairs. May hybridize with ornamental “sweet brooms.”
Example: Spanish broom
*Spartium junceum*
Fabaceae, the pea family

**CATEGORY:** Prohibited genera

**BACKGROUND**
- All brooms are prohibited; this is one of several invasive broom species
- Native to Mediterranean region; introduced to California in 1848 as ornamental; planted along CA mountain highways in late 1930s
- Flowers produce yellow dye and essential oil sometimes used in perfumery
- Seed dispersal by water, soil movement, human activities and animals
- Seeds remain viable for at least 5 years

**DESCRIPTION:** Shrub to small tree, 10–15 feet tall; mature plants have one to several trunks; considered less invasive than Scotch, French brooms

**Roots:** Taproots deep, branched; associated with nitrogen-fixing bacteria

**Leaves:** Compound with 3 leaflets, oblong to ovate, mostly 0.4 to 0.8 inches long, with sparse to dense flattened short silvery hairs

**Stems:** Simple, sparse, small (<0.5 to 1 inch long), linear to oval or lanceolate-shaped with smooth-margins; upper surface hairless; lower surface covered with flattened short hairs

**Flowers:** Pealike, usually bright yellow; up to 1 inch long; grow on both sides of main stems

**Seeds:** In pods 2–4 inches long, ~0.2 inches wide; covered with flat, long, silver, silky hairs; contains 10–15 oval, smooth reddish-brown seeds <0.2 inches long

**HABITAT:** Open disturbed sites, such as logged or burned sites, roadsides, and pastures; can invade somewhat undisturbed grasslands, woodlands, and open forests

**SIMILAR PLANTS:** Scotch and French broom; cylindrical stem shape distinguishes it from other brooms

*Entire genus is prohibited. This example species is one most likely to be encountered.*
Bright yellow pealike flowers. Seed pods are 2–4 inches long, narrow and covered with silky silver hairs. Shrub to small tree.
Buffalobur
*Solanum rostratum*
Solanaceae, the nightshade family

**CATEGORY:** Control

**BACKGROUND**
- Native to the Great Plains region of the U.S.
- Contaminant of bird seed
- Disperses by tumbling in the wind; seeds attach to animals or equipment
- Seed longevity not reported

**DESCRIPTION:** Annual with yellow spines and star-shaped hairs; up to 2 feet tall

**Roots:** Taproot

**Leaves:** Wavy lobed to the midrib and covered with starlike hairs; spiny midribs and leaf stalks

**Flowers:** Bright yellow, 1 inch across, with 5 petals

**Seeds:** Berries enclosed in a spiny bur; seeds black, flat, and wrinkled

**HABITAT:** Pastures, dry rangeland, roadsides, disturbed areas, and under bird feeders

**SIMILAR PLANTS:** Perennial horse nettles and nightshades
Spines on stems, leaves, and flowers make the plant untouchable. Seedling leaves have deeply lobed margins and prominent veins. Berries are enclosed in a spiny bur.
Canada thistle
*Cirsium arvense*
Asteraceae, the sunflower family

**BACKGROUND**
- Native to Eurasia; introduced as a contaminant in crop seed
- Disperses by wind-carried seed (up to 1,000 yards) and creeping roots
- Seed longevity up to 10 years

**DESCRIPTION:** Erect perennial with spiny leaves; up to 3 feet tall

**Roots:** Vertical and creeping horizontal roots may be 20 feet deep and 15 feet across

**Leaves:** Basal rosette and stem leaves oblong to lance-shaped, shallow-lobed, and toothed with spiny margins; upper leaf surface dark green, smooth; lower leaf surface light green with woolly hairs

**Flowers:** Numerous clustered flower heads; purplish-pink disk flowers

**Seeds:** Tan achenes with feathery bristles

**HABITAT:** Roadsides, cultivated fields, pastures, and rangelands

**SIMILAR PLANTS:** Bull thistle has stiff hairs on the upper leaf surface

**CATEGORY:** Containment
Flowers are purple to lavender, occasionally white. First seedling leaves are oblong to egg-shaped. Leaves are wavy margined and spiny. Flower heads are numerous, small, and urn-shaped, and the bracts are spineless.
Common crupina
_Crupina vulgaris_
Asteraceae, the sunflower family

**CATEGORY:** Control

**BACKGROUND**
- Native to the Mediterranean region
- Reproduces by seed
- Disperses by means of floating seed and by rodents that cache seeds
- Seeds live less than 2 years

**DESCRIPTION:** Winter annual up to 3 feet tall; develops large infestations on rangelands

**Roots:** Fibrous

**Leaves:** Rosette and stem leaves pinnately lobed; lobes narrow and opposite; covered with short stiff hairs. Rosette leaves die as flowering starts

**Flowers:** Pink to purple disk flowers; cylindrical to urn-shaped flower heads borne on branch tips; bracts below flowers lance-shaped with entire margin

**Seeds:** Black-brown, cylindrical achene with a ring of black, bristly hairs at the point of attachment

**HABITAT:** Canyon grasslands, rangelands, and forests

**SIMILAR PLANTS:** Diffuse knapweed bracts have fringed or comblike margin with a spiny tip
Flowers are pink to purple in a compact, elongated head. Cotyledons (first leaves) have a distinctive bright purple midrib. Leaves are alternate and pinnately lobed.
BACKGROUND
• Introduced from Europe as a water garden plant; first introduced into the U.S. from Canada on boats and trailers
• Reproduces primarily from turions (vegetative propagules); each plant can produce up to 100 turions
• Travels between distant water bodies on boats and trailers

DESCRIPTION: Emergent, free-floating annual plant that in our colder climate can form dense infestations, shading any plants below the water surface

Roots: Well developed but not attached to sediment; has stolons

Leaves: Floating oval leaves, 1–2 inches wide, with leathery, heart-shaped bases

Flowers: White petals about 0.5 inch wide, above 3 green sepals; each plant has either male or female flowers, the males with 9–12 stamens

Seeds: Berry contains seeds about 0.04 inch long

HABITAT: Primarily ponds or lakes but also slow-moving streams

SIMILAR PLANTS: None
Leaves are oval and resemble lily pads.
**Common reed (Phragmites)**

*Phragmites australis*

Poaceae, the grass family

**CATEGORY:** Control

**BACKGROUND**
- Both native and introduced types, only the introduced are noxious
- Dense stands tend to decrease bird and mammal diversity
- Reproduces from seed and rhizomes
- Establishment from seed requires less than 2 inches of water
- Wind dispersal of seed could be farther than 300 feet
- Rhizomes can live up to 6 years; seed viability is low

**DESCRIPTION:** Perennial, warm-season grass; 6–15 feet tall

**Roots:** Fibrous; rhizomes more than 0.6 inch in diameter (rhizomes of natives less than 0.6 inch in diameter)

**Leaves:** Flat, hairless leaves are 6 inches to 2 feet in length and 0.4–2.4 inches wide

**Flowers:** Tawny-colored spikelets with tufts of silky hairs

**Seeds:** With tufts of silky hairs

**HABITAT:** Wet areas, often seasonally flooded

**SIMILAR PLANTS:** Lower stems are yellow in invasive strains and reddish brown or reddish purple in the native strain; first glume in spikelet is less than 0.14 inch in the invasive strains and more than 0.17 inch in the native
Seeds are light and disperse in the wind. Rhizomes allow dense stands to form. Grass blade angles away from the stem at the collar region.
Curlyleaf pondweed  
*Potamogeton crispus*
Potamogetonaceae, the pondweed family

**BACKGROUND**
- Introduced
- Plant decay during the summer can result in low-oxygen conditions that stress fish
- Reproduces primarily by turions that are 60 to 80% germinable and viable for several years
- Plant fragments on boats and trailers allow long-distance dispersal; long-distance dispersal is also possible by turions

**DESCRIPTION:** Aquatic perennial; begins to sprout in late fall and can grow through the winter; begins to break up in summer, scattering the turions

**Roots:** Underground structures include rhizomes that help anchor plants in the sediment and sprout new plants

**Leaves:** Up to 3 inches long and 0.5 inch wide with wavy, fine-toothed margins

**Flowers:** Small flowers are arranged on dense, terminal spikes up to 2.75 inches long that extend above the water surface

**Seeds:** Fruits have a cone-shaped beak and a crownlike ridge; turions 0.25–0.75 inch long are produced on the root system

**HABITAT:** Shallow and deep waters

**SIMILAR PLANTS:** Clasping leaf pondweed, red pondweed

**CATEGORY:** Containment
Turions are leaflike vegetative structures that form new plants. Leaves are up to 3 inches long with wavy margins. Dense infestations interfere with boating.
Dalmatian toadflax

*Linaria dalmatica ssp. dalmatica*
Scrophulariaceae, the figwort family

**CATEGORY:** Containment

**BACKGROUND**
- Introduced from Europe as a garden ornamental
- Produces nearly ½ million seeds
- Disperses short distances by means of wind-blown seed, particularly on snow, and by means of creeping roots
- Seeds live up to 10 years

**DESCRIPTION:** Perennial; erect stems up to 4 feet tall with creeping roots and snapdragonlike flowers

**Roots:** Vertical and creeping lateral roots

**Leaves:** Waxy, bluish-green, egg- to lance-shaped with tips tapering to a point; sessile, with base clasping the stem

**Flowers:** Bright yellow; 1–2 inches long including spur; throat and lower lip often tinged orange or red; racemes elongate at the tips

**Seeds:** Black to dark brown, ridged, and irregularly angled

**HABITAT:** Arid rangelands, pastures, and roadsides

**SIMILAR PLANTS:** Yellow toadflax has linear leaves
Bright yellow flowers with long spurs look like snapdragon flowers. Young plants have sessile leaves that are egg- to lance-shaped. Leaves are bluish-green and clasp the stem.
**Diffuse knapweed**  
*Centaurea diffusa*  
Asteraceae, the sunflower family

**CATEGORY:** Containment

**BACKGROUND**
- Native to Eurasia
- Fire stimulates seed germination
- Disperses by tumbling long distances in the wind
- Seed longevity not reported

**DESCRIPTION:** Annual, biennial, or short-lived perennial up to 3 feet tall; a single stem gives the plant a bushy appearance

**Roots:** Sturdy taproot

**Leaves:** Lower stem leaves up to 6 inches long and pinnately lobed; upper leaves linear

**Flowers:** White, pink, or sometimes purple disk flowers; bracts below the flower yellowish green with a light brown, comblike margin and short, stiff, central spine

**Seeds:** Gray to dark brown; tipped by plumes that fall off at maturity

**HABITAT:** Rangeland, pastures, sandy river shores, gravel banks, and disturbed sites

**SIMILAR PLANTS:** Squarrose knapweed central spine on bract below flower is curved downward; diffuse knapweed central spine is not bent
Flowers are generally white, but sometimes pink to lavender. Each floral bract is tipped with a long, slender spine and fringed with smaller spines. Rosette leaves are pinnately lobed and up to 6 inches long.
**BACKGROUND**
- Introduced from Europe as a source of blue dye
- Reproduces by seed
- Thought to disperse medium to long distances given the distances between patches in southeastern Idaho
- Seed longevity not reported

**DESCRIPTION:** Biennial, winter annual, or short-lived perennial; up to 3½ feet tall

**Roots:** Long taproot up to 3 feet deep

**Leaves:** Bluish-green with pale midvein; basal rosette leaves lance-shaped with rounded tip, slightly wavy margin, and base tapering to the stalk; stem leaves alternate, sessile, lanceolate, with base clasping the stem

**Flowers:** Flat-topped clusters of bright yellow, 4-petalled flowers

**Seeds:** Fruit pendulous, purplish-brown at maturity, teardrop shaped; one yellowish to orangish-brown seed per fruit

**HABITAT:** Rangeland, forest, pastures, cultivated fields, roadsides, and disturbed sites

**SIMILAR PLANTS:** None
Fruits are teardrop-shaped and purplish brown at maturity. Rosette leaves are elliptic to lance-shaped with the base tapering to the stalk. Leaves have white midribs and clasp the stem at their base.
Eurasian watermilfoil
*Myriophyllum spicatum*
Haloragaceae, the watermilfoil family

CATEGORY: Control

BACKGROUND
• Introduced from Eurasia as an aquarium plant
• Forms dense subsurface or surface mats
• Disperses by means of floating stem fragments, by rhizomes, and possibly by waterfowl
• Seed longevity not reported

DESCRIPTION: Submerged aquatic perennial; stems to 13–22 feet long, branching near the water surface; finely dissected, featherlike leaves

Roots: Rhizomes

Leaves: Dark green to brown, pinnately dissected, to 1¼ inch long; generally with more than 12 leaflet pairs per leaf, in whorls of 4 around the stem

Flowers: Erect flowering spike up to 6 inches long; pinkish inconspicuous male and female flowers in whorls around the stem

HABITAT: Ponds, lakes, streams, canals, and ditches

SIMILAR PLANTS: Northern watermilfoil generally has fewer than 12 leaflet pairs and develops turions (specialized buds)
The flowering stem is a pink spike up to 8 inches long held erect above the water. Eurasian watermilfoil has more leaf pair divisions (12 or more) and often a flatter leaf tip than northern watermilfoil.
Fanwort
*Cabomba caroliniana*
Cabombaceae, the water shields and fanworts

**BACKGROUND**
- Native to southern U.S. and South America
- Dense mats shade plants below and impede boating and fishing
- Reproduces from plant fragments or seeds; seeds in northern regions like Idaho may not be viable
- Plant fragments could disperse more than 300 feet in flowing water

**DESCRIPTION:** Aquatic perennial that is primarily submersed and rooted in sediment but sometimes forms oval leaves at the water surface; stems can reach 30 feet in length

**Roots:** Fibrous roots; short rhizomes

**Leaves:** Opposite, attached by a single petiole, finely divided and fan-shaped above the petiole; submersed leaves 1–2 inches across; leaves at the water surface are 2-inch ovals

**Flowers:** White to pink, solitary, with 3 petals and 3 sepals; 0.5–0.75 inch in diameter; arise from floating leaf axils

**Seeds:** Potentially not formed in northern climates

**HABITAT:** Lakes and ponds, occasionally rivers, usually along the shoreline initially

**SIMILAR PLANTS:** None
Flowers are white to pink with 3 petals and 3 sepals. Leaves are divided into sections that create a fanlike appearance.
Feathered mosquito fern

*Azolla pinnata*

Azollaceae, the mosquito fern family

**BACKGROUND**
- Reportedly introduced as a water garden ornamental
- Affects boating and reduces light to submersed vegetation; can sometimes double its mass in 3 days
- Decaying plant material can increase nitrogen levels and lower oxygen levels
- Reproduces via spores
- Can move more than 100 yards with currents or winds

**DESCRIPTION:** Annual, free-floating plant, 0.6–1 inch across; resembles moss more than a fern

**Roots:** Small in diameter; feathery

**Leaves:** 0.04–0.08 inch long leaves, each with 2 lobes that overlap in pairs; upper lobes tend to green with a reddish tint and the lower lobes are translucent and brown

**Flowers:** Fruiting body containing spores is round, 0.04 inch in diameter, and located on the underside of side branches

**Spores:** 2 types—1 microscopic and the other 0.005–0.02 inch in diameter

**HABITAT:** Still or flowing water; survives in moist soil temporarily

**SIMILAR PLANTS:** None
Arrangement of small leaves along the stem gives the appearance of a larger, triangle-shaped leaf.
BACKGROUND
• Eurasian native that has naturalized in North America
• One of the most noxious weeds in agriculture
• Disperses by means of creeping roots and for short distances by seed
• Seeds remain viable for up to 50 years

DESCRIPTION: Perennial vine with deep creeping roots and twining stems up to 6 feet long; forms dense mats or climbs over other plants

Roots: Lateral creeping roots to 9 feet deep
Leaves: Alternate, arrowhead-shaped, dull green, to 2 inches long; sometimes covered with whitish powder
Flowers: White or pinkish, funnel-shaped, in leaf axils
Seeds: Dark gray-brown with irregular bumps
HABITAT: Cultivated fields, pastures, lawns, roadsides, and disturbed sites
SIMILAR PLANTS: Wild buckwheat is an annual with pointed leaves and papery leaf sheaths
Flowers are white or pinkish and funnel-shaped, leaves are arrowhead-shaped, and stems are twisted. Seedlings have ovate cotyledons (first leaves) with a notched tip. Stems twine around other plants.
Flowering rush
Butomus umbellatus
Butomaceae, the flowering rush family

CATEGORY: Containment

BACKGROUND
• Introduced
• Sold commercially for use in garden pools
• A problem in the Great Lakes and in Flathead Lake, Montana
• Reproduces from rhizomes and seeds
• Small seeds disperse more than 100 yards in flowing water

DESCRIPTION: Aquatic perennial; emerged or submersed plants grow to 5 feet tall and form dense stands

Roots: Thick, fleshy, and with fleshy rhizomes

Leaves: Lanceolate, triangular in cross section, and up to 40 inches long

Flowers: Pink with 3 sepals and 3 petals; arranged in umbels

Seeds: Brown; 0.04 inch long with ridges along the long axis

HABITAT: Permanently to seasonally flooded areas; survives in water up to 20 feet deep

SIMILAR PLANTS: Bulrushes and rushes when not flowering
Seeds are small, ridged, and brown. Fleshy rhizomes sprout closely spaced plants. Leaves are triangular in cross section.
Giant hogweed

*Heracleum mantegazzianum*

Apiaceae, the carrot or parsley family

**BACKGROUND**

- Native to southwestern Asia; introduced as an ornamental
- Sap causes photodermatitis that causes blistering
- Disperses less than 1 foot from new crowns on roots; seeds move in water and attach to animals
- Seeds remain viable for 10 years

**DESCRIPTION:** Biennial or perennial up to 15 feet tall with purple-blotched stems covered with white hairs

- **Roots:** Tuberous
- **Leaves:** 5 feet long to 2½ feet wide; pinnately compound with 3 deeply lobed and toothed leaflets
- **Flowers:** White, compound; flat-topped umbel 2½ feet across
- **Seeds:** Elliptic to ovate, flattened, with winged ribs, covered with short hairs

**HABITAT:** Riparian areas and disturbed moist sites

**SIMILAR PLANTS:** Cow parsnip, a widespread native, lacks purple blotches on stems and leaf stalks and has fewer flower rays
White flowers form a flat-topped umbel. Three-lobed leaves can be 5 feet long. Stems have purple blotches.
Giant knotweed

*Polygonum sachalinense*

Polygonaceae, the buckwheat family

**CATEGORY:** Control

**BACKGROUND**
- Introduced from Japan and Sakhalin Island as a garden ornamental
- Hybridizes with Japanese knotweed
- Reproduces by seed, rhizomes, and stem fragments that root at the nodes
- Disperses by means of floating stem and rhizome fragments and short distances by seed
- Seed longevity not reported

**DESCRIPTION:** Clumping perennial with hollow stems; up to 12 feet tall

**Roots:** Long, creeping rhizomes up to 18 feet long

**Leaves:** Broadly lance-shaped, 6-12 inches long, with a heart-shaped base

**Flowers:** Panicles in the leaf axils with numerous small white flowers

**Seeds:** Glossy; brown to dark brown

**HABITAT:** Moist sites, wetlands, and riparian areas

**SIMILAR PLANTS:** Bohemian and Japanese knotweeds have smaller leaves; Japanese knotweed has flat leaf bases
Flowers are small, white, and grow where the leaf attaches to the stem. Leaves are heart-shaped and up to 12 inches long.
Giant salvinia
Salvinia molesta
Salviniaceae, the floating fern family

BACKGROUND
• Introduced
• Capable of doubling its mass in 4–10 days
• Decaying vegetation can reduce oxygen levels in the water
• Reproduces by plant fragmentation
• Plants float with water currents and can disperse farther than 100 yards

DESCRIPTION: Free-floating fern; dense infestations shade submersed plants; lacks flowers and seeds

Roots: Feather-like, resemble leaves

Leaves: 0.5–1.5 inches long, oblong, with a distinct mid rib and stiff hairs on the upper surface; hairs divide into 4 sections that fuse at the tip, creating an eggbeater-like appearance; when plants pack together, the leaves orient vertically

Sporangia: Egg-shaped sporangia are located on the submersed leaves

Seeds: None

HABITAT: Still and flowing waters

SIMILAR PLANTS: None
Roots appear leaflike. Sporangia are located on submersed leaves; they contain no spores. Leaves in dense infestations pack tightly together.
Hoary alyssum  
Berteroa incana  
Brassicaceae, the mustard family  

**CATEGORY:** Containment

**BACKGROUND**
- Native to Europe; introduced about 1900 to North America
- Poisonous to horses, causing leg swelling, fever
- Lacks dispersal adaptations but possibly moved by animals; reportedly disperses long distances
- Seed longevity not reported

**DESCRIPTION:** Annual to short-lived perennial with multiple stems from the base; up to 2 feet tall; covered all over with grayish-green, star-shaped hairs

**Roots:** Taproot

**Leaves:** Alternate, linear-elliptic, with entire margins; upper leaves sessile

**Flowers:** 4 white, deeply notched petals per flower; flower stalk elongates during fruiting

**Seeds:** Seedpods flattened and oval

**HABITAT:** Roadsides, disturbed areas, and canyon grassland to wet meadows

**SIMILAR PLANTS:** None
White flowers with 4 notched petals appear to have 8 petals. Seedling leaves are oblong to oval. Plant is grayish-green. Stem leaves attach at the leaf base.
**Houndstongue**  
*Catnoglossum officinale*  
Boraginaceae, the borage family

**CATEGORY:** Containment

**BACKGROUND**  
- Native to Europe; introduced through crop seed  
- Toxic to livestock, attacking the liver and producing neurological effects  
- Reproduces by seed  
- Hooked hairs on seed attach to animals, allowing long-distance dispersal  
- Seeds live less than 5 years

**DESCRIPTION:** Biennial or short-lived perennial up to 3 feet tall

**Roots:** Taproot

**Leaves:** Basal leaves forming the first year are narrowly lance-shaped, 4–8 inches long, hairy, and rough; upper stem leaves alternate, narrowly lance-shaped

**Flowers:** Reddish-purple, 5-lobed, in upper leaf axils

**Seeds:** 4 egg-shaped seeds, or nutlets, with hooked prickles

**HABITAT:** Open disturbed moist places, roadsides, pastures, and wet grasslands

**SIMILAR PLANTS:** None
Flowers point down and are reddish-purple. Leaves are lance-shaped and hairy. Seeds are clustered in sets of 4 and have hooked prickles.
**Hydrilla**
*Hydrilla verticillata*
Hydrocharitaceae, the waterweed family

**CATEGORY:** EDRR

**BACKGROUND**
- Native to Asia; introduced as an aquarium plant
- Considered the most problematic aquatic plant in the U.S.
- Reproduces by specialized buds in leaf axils, tubers attached to roots, and above and belowground stems
- Disperses by means of buds floating with the current; tubers provide for short-distance dispersal
- Seed longevity not reported

**DESCRIPTION:** Submerged aquatic perennial with slender branched stems up to 25 feet long; forms dense stands or subsurface mats

**Roots:** Slender; develop at certain nodes

**Leaves:** Sessile; linear to lance-shaped; $\frac{1}{4}$–1 inch long and $\frac{1}{16}$–$\frac{1}{4}$ inch wide; in whorls of 5–8; leaf margins saw-toothed

**Flowers:** 3 white petals; attached to base of leaf

**Seeds:** Elliptic, smooth, and brown; fruit is constricted between seeds

**HABITAT:** Canals, rivers, ponds, lakes, and reservoirs

**SIMILAR PLANTS:** Brazilian elodea has 4–6 leaves per whorl; common elodea has 2–3 leaves per whorl and flowers that float at the surface
Leaves occur in whorls of 4–8; the leaf margin is saw-toothed. Flowers and specialized buds occur where the leaf attaches to the stem. Small, rounded tubers can start new plants (bottom photo, lower left).
Iberian starthistle
*Centaurea iberica* Spreng.
Asteraceae, the sunflower family

**CATEGORY:** EDRR

**BACKGROUND**
- Native to eastern Europe along the Mediterranean Sea
- Toxic to horses, causing “chewing disease”
- Reproduces by seed
- Disperses short distances; its pappus prevents wind dispersal but helps seed attach to animals for wider dispersal
- Seeds are viable for at least 3 years

**DESCRIPTION:** Acts as an annual or perennial; grows to 3 feet tall from a stem that bolts in spring to early summer

**Roots:** Taproot

**Leaves:** Hairy, 4- to 8-inch-long leaves have lobed margins and resin dots; new leaves sparsely hairy and not green; rosette with spines in the center forms prior to stem bolting

**Flowers:** Nearly white to pink or pale purple; within a head; bracts below have frayed margins with a ½- to less than 1-inch-long spine

**Seeds:** Achenes light colored, possibly with brown streaks; seeds have a pappus less than 1/10 inch long

**HABITAT:** Moist meadows, streambanks, pasture, grass hay

**SIMILAR PLANTS:** Purple starthistle; yellow starthistle has yellow flowers; all three species have spines on the bracts
White to pale purple flowers have spines on the bracts. Seeds are white to brown with a fringe of hairs called a pappus. Rosette attaches to the taproot. Plants bolt from rosettes in late spring to early summer.
Japanese knotweed
*Polygonum cuspidatum*
Polygonaceae, the buckwheat family

**BACKGROUND**
- Introduced from Japan and China as an ornamental
- Hybridizes with giant knotweed
- Reproduces by rhizomes and stem fragments that root at the nodes
- Disperses by means of floating stem and rhizome fragments and short distances by seed
- Crown lives more than 5 years, seeds likely at least 4 years

**DESCRIPTION:** Clumping perennial with hollow stems; up to 9 feet tall

**Roots:** Long, creeping rhizomes up to 18 feet long

**Leaves:** Broadly egg-shaped with pointed tip and flat base; twigs zig-zag; purple-spotted stems have sheathing membranous stipules

**Flowers:** Drooping panicle at the leaf axils with numerous small white flowers

**Seeds:** Glossy; brown to dark brown

**HABITAT:** Disturbed moist sites, wetlands, and riparian areas

**SIMILAR PLANTS:** Bohemian knotweed has erect flowers; giant knotweed has larger, more elongated leaves with a heart-shaped base

**CATEGORY:** Control
Drooping clusters of white flowers grow where the leaf attaches to the stem. Leaf base is straight.
**BACKGROUND**
- Native to the Mediterranean; introduced as a hay and pasture grass
- Potentially poisonous to livestock; can produce toxic levels of hydrocyanic acid
- Tenth most noxious weed in the world
- Disperses by means of creeping rhizomes and rhizomes spread by harvesting equipment
- Seeds live at least 2 years

**DESCRIPTION:** Coarse, tufted perennial grass up to 6 feet tall

**Roots:** Fibrous rhizomes with brown scales at the nodes

**Leaves:** Bright green, up to 1 inch wide, with scabrous margins and a prominent whitish midvein; sheath is open; ligules membranous with a hairy fringe

**Flowers:** Large, open, pyramid-shaped panicles up to 12 inches long; spikelets mature to dark reddish or purplish brown

**Seeds:** Reddish brown to black; oval shaped

**HABITAT:** Cultivated fields, pastures, ditches and canal banks, and roadsides

**SIMILAR PLANTS:** Shatter cane is an annual without rhizomes
Ligules are membranous, with a short fringe of hairs. Plant produces a mass of thick rhizomes.
Jointed goatgrass
_Aegilops cylindrica_
Poaceae, the grass family

**BACKGROUND**
- Native to southern Europe and western Asia
- Readily hybridizes with its close relative, wheat
- Reproduces by seed
- Harvesting and grain transport equipment disperse seeds
- Seeds remain viable at least 5 years

**DESCRIPTION:** Winter annual grass with spikelets that resemble winter wheat; up to 4 feet tall

**Roots:** Fibrous

**Leaves:** Flat blades about ½ inch wide and 4 inches long with evenly spaced fine hairs along the margins and down the sheath opening; ligule short and membranous; auricles short and hairy

**Flowers:** Cylindrical spikes; spikelets in a series of joints with uppermost joints tipped by straight awn

**Seeds:** Reddish to light brown, resembling grains of winter wheat; seed often attached to seedling

**HABITAT:** Wheat fields, pastures, rangeland, roadsides, and fencerows

**SIMILAR PLANTS:** Winter wheat spikes do not break apart between the nodes
Seed head is a narrow, cylindrical spike that contains 2–12 spikelets (joints). Hairs extend outward from the leaf edges, and hair also appears below the collar.
Leafy spurge
*Euphorbia esula*
Euphorbiaceae, the spurge family

**CATEGORY:** Containment

**BACKGROUND**
- Native to Eurasia
- Milky sap toxic to humans and livestock
- One of the most tenacious weeds in the U.S.
- Reproduces by seed and from creeping roots
- Disperses less than 15 feet by expelled seeds; survives ingestion in sheep for potential long-distance dispersal
- Seeds remain viable for at least 8 years

**DESCRIPTION:** Erect perennial up to 2½ feet tall with roots exceeding 20 feet in depth; contains milky white sap

**Roots:** Long, creeping horizontal and long vertical; new shoots can develop from pinkish root buds

**Leaves:** Nearly opposite or in whorls; linear to narrowly lance-shaped; sessile; up to 4 inches long

**Flowers:** A pair of showy, yellowish-green, heart-shaped bracts enclose small flower clusters

**Seeds:** Egg-shaped to oblong, with yellowish appendage near the end of attachment; contained in 3-chambered capsule

**HABITAT:** Rangeland, pastures, roadsides, and riparian areas

**SIMILAR PLANTS:** Young yellow toadflax does not produce milky latex
Heart-shaped bracts appear to be a yellowish flower. Stems and leaves exude a milky juice when broken.
**Matgrass**  
*Nardus stricta*  
Poaceae, the grass family

**CATEGORY:** Control

**BACKGROUND**  
- Native to eastern Europe  
- Not palatable to most livestock  
- Eliminates other vegetation within each dense tuft  
- Disperses medium to long distances in spring or fall when animal hooves break mat fragments  
- Seeds remain viable for up to 2 years

**DESCRIPTION:** Slow-growing perennial bunchgrass with tufts 3 feet or more across and stems up to 8 inches tall

**Roots:** Fibrous

**Leaves:** Tightly folded blades bend at a right angle to the stem; ligule short and membranous; auricles lacking

**Flowers:** Slender spikes; straw-colored spikelets tipped by short, straight awns occur on one side of the stem

**HABITAT:** Wet meadows

**SIMILAR PLANTS:** Sometimes confused with young fine-leaved bunchgrasses and tufted sedges
Spikelets occur along 1 side of the stem. Tuft of crowded stems grows at ground level. The leaf blade bends at nearly a right angle to the stem.
Meadow knapweed
*Centaurea debeauxii*
Asteraceae, the sunflower family

**CATEGORY:** Control

**BACKGROUND**
- Native to Europe
- Used as a forage in Oregon in the 1950s
- Hybrid from black knapweed and brown knapweed
- Dispersal not reported, likely similar to spotted knapweed
- Seed longevity not reported

**DESCRIPTION:** Bushy perennial up to 3½ feet tall

**Roots:** Sturdy taproot

**Leaves:** Basal rosette leaves entire, toothed, or lobed and up to 4 inches long; stem leaves narrow, lance-shaped, sessile, and covered with short stiff hairs

**Flowers:** Pink to reddish-purple disk flowers; flower head solitary at end of stem and up to ¾ inch wide; tan to dark-brown bracts subtend flower head; bract margins a comblike fringe to a blunt ruffle

**Seeds:** Tan achene with fine hairs

**HABITAT:** Wet meadows, pastures, forest openings, roadsides, and waste areas

**SIMILAR PLANTS:** Similar to black and brown knapweeds, whose bracts are not spiny and have comblike margins
Broad flower heads are free of spines. Early basal rosette leaves are lance-shaped, entire. Multiple branching stems support pink to reddish-purple solitary flowers. Stem leaves are covered with short, stiff hairs.
**Mediterranean sage**  
*Salvia aethiopis*  
Lamiaceae, the mint family

**CATEGORY:** Control

**BACKGROUND**
- Introduced from Europe, possibly as an alfalfa seed contaminant
- Flowering stems disperse long distances in the wind
- Seed longevity not reported

**DESCRIPTION:** Biennial or short-lived perennial up to 2 feet tall with crushed leaves smelling like sage

**Roots:** Taproot with fibrous lateral roots

**Leaves:** Gray-green, ovate to triangular, lobed or deeply toothed, and up to 12 inches long on stalks nearly as long; leaf surfaces and stems covered with fine, white woolly hairs

**Flowers:** Irregular, whitish to pale yellow, in whorls of 5-10; flowering stems branch near the top into broad panicles

**Seeds:** 4 egg-shaped, smooth brown nutlets per flower

**HABITAT:** Dry areas, rangelands, and sagebrush communities

**SIMILAR PLANTS:** Rosettes of common mullein do not smell like sage
Leaves are gray-green with wooly white hairs. Flowers are white to pale yellow and arranged like a candelabra.
**Milium**  
*Milium vernale*  
Poaceae, the grass family  

**CATEGORY:** Containment  

**BACKGROUND**  
- Native to southern Europe and western Asia  
- Problem weed in winter wheat  
- Reproduces exclusively by seed  
- Disperses as a contaminant in grain  
- Seed longevity not reported  

**DESCRIPTION:** Winter annual grass up to 2½ feet tall  

**Roots:** Fibrous  

**Leaves:** Flat; to ¼ inch wide and 4 inches long; veins and margins appear roughened; ligules membranous, to ¼ inch long; auricles lacking  

**Flowers:** Open panicle up to 8 inches long; 1 awnless spikelet, up to ⅛ inch long, on the tip of each panicle branch  

**Seeds:** Single, hard, and shiny  

**HABITAT:** Cultivated fields and pastures  

**SIMILAR PLANTS:** None
Shiny seeds are shed before winter wheat matures.
Musk thistle
Carduus nutans
Asteraceae, the sunflower family

BACKGROUND
• Native to Eurasia; introduced as an ornamental
• Reproduces by seed
• Seeds disperse in wind as far as 50 yards
• Seeds remain viable for at least 10 years

DESCRIPTION: Biennial or winter annual with prickly leaves and prickly winged stems; up to 5 feet tall

Roots: Long taproot
Leaves: Basal leaves up to 12 inches long, oval to elliptic, deeply lobed, with prickly toothed margins; stem leaves alternate, reduced, smooth to sparsely hairy
Flower: Purple to pink disk flowers, 1½–3 inches in diameter, solitary at the stem tips, often nodding; spine-tipped bracts subtend the flowerhead
Seeds: Yellowish-brown, 3/16-inch long, with hairlike plume

HABITAT: Rangeland, pastures, stream banks, and roadsides

SIMILAR PLANTS: Canada thistle is a perennial with creeping roots, Scotch thistle has receptacles that are pitted and not covered with bristles, and plumeless thistle has a spiny winged stem below the flower head
Large showy flowers are flat, nodding, and surrounded by numerous bracts. Shiny seeds have hairlike plumes. Seedling leaves are oblong to elliptic with prickly toothed margins. Leaves extend onto the stem, giving it a winged appearance.
Orange hawkweed

*Hieracium aurantiacum*

Asteraceae, the sunflower family

**CATEGORY:** Control

**BACKGROUND**
- Native to Europe; introduced as an ornamental
- Reproduces by seeds and vegetatively by aboveground stems and rhizomes
- Seeds disperse at least 250 yards in the wind
- Seed longevity not reported; likely short-lived (several years)

**DESCRIPTION:** Perennial with hairy stems and leaves, orange dandelionlike flowers, and white milky sap

**Roots:** Fibrous roots, rhizomes, and stolons

**Leaves:** Basal leaves hairy, oblong-elliptic to lance-shaped; stems covered with black hairs, leafless, occasionally with a small leaf near the midpoint

**Flowers:** Orange, in dense to open clusters; bracts covered with glandular and black hairs subtend the flowers

**Seeds:** Dark brown to black; ribbed with white plumes

**HABITAT:** Meadows, rangelands, pastures, open forest, and disturbed sites

**SIMILAR PLANTS:** Yellow hawkweed is difficult to distinguish without flowers
Flowers are bright red-orange, the only orange-flowered hawkweed. Seedling leaves are oval to elliptic with bases tapering to the stalk. Bristly, mostly leafless stems arise from a basal rosette of leaves.
Oxeye daisy
*Leucanthemum vulgare*
Asteraceae, the sunflower family

**CATEGORY:** Containment

**BACKGROUND**
- Introduced from Europe as a garden ornamental
- Spread as a contaminant of grass and legume seed and in commercial wildflower packets
- Reproduces by seed and vegetatively from rhizomes
- Disperses short distances, likely less than 4 yards
- Most seeds die after 6 years but some survive to 39 years

**DESCRIPTION:** Perennial with numerous stems arising from the base; up to 3 feet tall

**Roots:** Shallow, creeping rhizomes

**Leaves:** Basal leaves stalked, spatula-shaped, with toothed to deeply lobed margins; upper leaf stalks are short and clasp the stem

**Flowers:** Solitary daisylke flower heads with white ray flowers and yellow disk flowers

**Seeds:** Dark brown to black achenes with ribs

**HABITAT:** Grasslands, meadows, pastures, and roadsides

**SIMILAR PLANTS:** None
White ray flowers (outer petals) surround inner yellow disk flowers. Leaves at the plant base are spatula-shaped and lobed.
Parrotfeather milfoil
*Myriophyllum aquaticum*
Haloragaceae, the watermilfoil family

**BACKGROUND**
- Introduced from South America as an aquarium plant and pond ornamental
- Develops colonies that form large subsurface or surface mats
- Floating stem fragments establish new plants; potentially long-distance dispersal
- Seed longevity not reported

**DESCRIPTION:** An emersed perennial with stems up to 15 feet long

**Roots:** Creeping rhizomes; fibrous roots at nodes on stem fragments

**Leaves:** Light gray-green, pinnately dissected in a featherlike pattern, with 13 leaflet pairs or more; in whorls of 5–6 around the stem; flower spike stems lie parallel to the water surface

**Flowers:** Inconspicuous, translucent white, in the axils of the upper submerged and emersed leaves

**Seeds:** Fruits not known to develop on introduced plants

**HABITAT:** Ponds, lakes, rivers, canals, and ditches

**SIMILAR PLANTS:** Northern watermilfoil has 13 or fewer leaflet pairs, flower spike stem that remains slender and erect near the water surface, and turions

**CATEGORY:** Control
Flowers occur in the axils of the leaves. Rhizomes at nodes allow the plant to form mats. Leaves are gray-green in whorls of 5 or 6. Leaves appear featherlike.
Perennial pepperweed
*Lepidium latifolium*
Brassicaceae, the mustard family

**CATEGORY:** Containment

**BACKGROUND**
- Native to southern Europe and western Asia
- Reproduces by seed and creeping roots
- Disperses long distances when adjacent to water
- Seed longevity not reported but likely short-lived

**DESCRIPTION:** Perennial to 6 feet tall; creeping roots

**Roots:** Long, creeping rhizomes to a depth of 9 feet

**Leaves:** Green to gray-green, waxy, with a prominent whitish midvein; basal leaves up to 12 inches long, stalked, and larger and wider than stem leaves; stem leaves alternate, sessile, oblong to lance-shaped, with saw-toothed margins

**Flowers:** Numerous small, white, 4-petalled flowers in dense clusters at the branch tips; inflorescences pyramid-shaped to rounded on top

**Seeds:** Pods flattened, round to ovate, slightly hairy, $\frac{1}{10}$-inch in diameter; seeds reddish brown and oval-shaped with a shallow groove and rough surface

**HABITAT:** Riparian areas, meadows, flood plains, cropland, irrigation ditches, and roadsides

**SIMILAR PLANTS:** None
Tiny white flowers occur in tight clusters. Basal leaves are stalked and lance-shaped.
Perennial sowthistle
Sonchus arvensis
Asteraceae, the sunflower family

CATEGORY: Control

BACKGROUND
• Native of western Asia and Europe
• Disperses short distances by means of creeping roots and 10 yards by seed
• Seeds remain viable for at least 3 years

DESCRIPTION: Erect perennial up to 6 feet tall branching in the upper portion of the plant; white milky sap

Roots: Rhizomes

Leaves: Lower leaves entire to deeply lobed, with prickly toothed margins; upper leaves have basal clasping lobes that are rounded

Flowers: Yellow dandelionlike flowers cluster at stem tips; flower heads smooth or with gland-tipped hairs

Seeds: Reddish-brown achene is slightly flattened, ribbed, traverse wrinkled, and tipped with white plumes

HABITAT: Cultivated fields, riparian areas, meadows, pastures, gardens, roadsides, and disturbed sites

SIMILAR PLANTS: Spiny sowthistle and annual sowthistle are both annuals with a taproot; annual sowthistle’s upper leaves have pointed basal clasping lobes
Dandelionlike leaves have prickly edges. Roots are creeping.
Plumeless thistle

_Carduus acanthoides_

Asteraceae, the sunflower family

**CATEGORY:** Containment

**BACKGROUND**
- Introduced from Eurasia
- Hybridizes with musk thistle
- Disperses within a few yards of the parent
- Seed longevity not reported

**DESCRIPTION:** Biennial up to 4½ feet tall

**Roots:** Long, thick taproot

**Leaves:** Basal leaves elliptic to lance-shaped, pinnately lobed, with prickly toothed margins; stem leaves smaller, alternate, hairy and prickly; stems spiny and winged

**Flowers:** Purple disk flowers, ½-1 inch in diameter, singly or clustered on flower stalks

**Seeds:** Glossy golden to brown achenes with stripes

**HABITAT:** Pastures, grasslands, and roadsides; drier sites than musk thistle

**SIMILAR PLANTS:** Musk thistle flowers are larger and lack the spiny winged stem below the flower head
Flowers are purple in flower heads up to 1 inch across. Leaves are pinnately lobed and prickly. Stems are winged and spiny.
Poison hemlock  
*Conium maculatum*  
Apiaceae, the carrot family  

**CATEGORY:** Containment

**BACKGROUND**  
• Introduced from Europe as a garden ornamental  
• Highly toxic to humans and animals  
• Seeds fall within 3 yards of parent; disperses long distances in water  
• Seed longevity is about 3 years

**DESCRIPTION:** Erect biennial up to 9 feet tall with fernlike leaves and hollow stems mottled with purple spots; has a disagreeable musty odor

**Roots:** Thick, white taproot

**Leaves:** First-year basal rosette leaves shiny green, triangular, 2–3 times dissected or pinnately lobed, compound, to 12 inches long; upper stem leaves similarly shaped but shorter

**Flowers:** Small, white, in umbrella-shaped clusters about 3 inches across

**Seeds:** Fruit grayish brown, flattened, and ridged; separated into 2 halves, each with one seed

**HABITAT:** Roadsides, pastures, fields, ditches, riparian areas, and disturbed, often moist, sites

**SIMILAR PLANTS:** Western water hemlock lacks purple spots and streaking on stems
White flowers are borne in many umbrella-shaped clusters. First year’s rosette has fernlike, pinnately divided leaves. Stem is mottled with purple splotches.
Policeman’s helmet
*Impatiens glandulifera*
Balsaminaceae, the impatiens family

**BACKGROUND**
- Native to Himalayan region of Asia; introduced as a garden ornamental
- Considered invasive in the British Isles, whose climate is similar to the Pacific Northwest’s
- Seed pods eject seeds as far as 15 feet; seeds from plants near water disperse long distances
- Seeds remain viable at least 2 years

**DESCRIPTION:** Herbaceous annual 6–10 feet tall with smooth, hollow stems tinged purple or reddish

**Roots:** Shallow, fibrous taproot

**Leaves:** Opposite, oblong to egg-shaped, sharply toothed, often in whorls of 3

**Flowers:** Orchidlike, white or pink to purple, in clusters from the leaf axils

**Seeds:** Black, large (¼–⅛ inch)

**HABITAT:** River edges, wetlands, and riparian areas

**SIMILAR PLANTS:** None
Flower shape resembles a British police helmet. Flower color ranges from white to all shades of pink to purple. Seed capsules explode when moist. Toothed leaves attach to the stem in pairs and are sometimes whorled.
BACKGROUND
- Introduced from the Mediterranean region
- Stout-spined burs injure humans and animals and puncture bicycle tires
- Potentially toxic to livestock
- Disperses medium to long distances, lodging in feet of animals or tires
- Seeds can survive about 20 years

DESCRIPTION: Prostrate summer annual with branched, reddish-brown stems up to 3 feet long; forms dense mats

Roots: Slender taproot

Leaves: Opposite, to 2 inches long; even pinnately lobed; leaflet oblong; 3–7 leaflet pairs per leaf

Flowers: Bright yellow with 5 petals; solitary in leaf axils

Seeds: Fruits are gray to yellowish tan, roughly circular burs that split into 5 sections, each with 2 stout, divergent spines

HABITAT: Disturbed sites, pastures, cultivated fields, roadsides, and walkways

SIMILAR PLANTS: None
Yellow flowers mature to produce spiny burs. Seedling leaves are pinnately compound with hairs.
Purple loosestrife
*Lythrum salicaria*
Lythraceae, the loosestrife family

**BACKGROUND**
- Native to Europe; introduced to the U.S. as an ornamental
- New shoots grow from the woody crown in spring
- Seeds disperse up to 10 feet; seeds from plants adjacent to water disperse long distances with currents
- Seed longevity is at least 3 years

**DESCRIPTION:** Semi-aquatic perennial with showy pinkish-purple flower spikes; up to 8 feet tall; stems branched and square or 5-angled

**Roots:** Spreading rhizomes

**Leaves:** Lance-shaped with smooth margins, sessile, mostly opposite or whorled

**Flowers:** Bright pinkish-purple spikes; petals with wrinkled margins

**Seeds:** Numerous, reddish brown capsules that are oval to triangular and flattened

**HABITAT:** Wetlands, stream banks, canals, ditches, and pond edges

**SIMILAR PLANTS:** Other garden loosestrife species

**CATEGORY:** Containment
Purple petals are noticeably crumpled. Stems are square and much branched, bearing opposite or whorled lance-shaped leaves.
Purple starthistle
*Centaurea calcitrapa* L.
Asteraceae, the sunflower family

**BACKGROUND**
- Native to southern Europe
- Toxic to horses, causing “chewing disease”
- Reproduces by seed that disperses short distances from the parent plant
- Seeds are viable for at least 3 years

**DESCRIPTION:** Acts as an annual or perennial; grows to 3 feet tall from a stem that bolts in spring to early summer

**Roots:** Taproot

**Leaves:** Hairy, 4- to 8-inch-long leaves have lobed margins and resin dots; new leaves light colored because of dense hairs; rosette with spines in the center forms prior to stem bolting

**Flowers:** Pale purple to purple; within a head; bracts below have frayed margins with a ½- to 1-inch-long spine

**Seeds:** Seeds are light-colored achenes, possibly with brown streaks

**HABITAT:** Silt-textured soils and alluvial soils and generally on drier sites than Iberian starthistle

**SIMILAR PLANTS:** Iberian starthistle; yellow starthistle has yellow flowers; all three species have spines on the bracts
Purple flowers have large spines. Seeds are streaked with brown and have no pappus. Spines remain in winter. Rosette leaves are as long as 8 inches. Plants reach to 3 feet tall.
Rush skeletonweed
*Chondrilla juncea*
Asteraceae, the sunflower family

**CATEGORY:** Containment

**BACKGROUND**
- Introduced from southern Europe
- Disperses long distances in canyons, likely 1–5 miles
- Seeds survive fewer than 5 years

**DESCRIPTION:** Perennial or biennial up to 3 feet tall with wiry branched flower stems; lower stems have dense, bristly, downward-pointing hairs; milky sap

**Roots:** Taproot and lateral roots

**Leaves:** Basal rosette leaves lance-shaped, shallow lobed, with a pointed terminal lobe and lateral lobes opposite and usually pointing backward toward the leaf base; stem leaves bractlike, often lacking

**Flowers:** Bright yellow, strap-shaped, in axils or at the ends of branches

**Seeds:** Pale to dark-brown ribbed achene

**HABITAT:** Roadsides, rangelands, pastures, and grain fields

**SIMILAR PLANTS:** Chicory and dandelion have similar rosette leaves, but chicory rosette leaves have lateral lobes that point outward or forward and rush skeletonweed rosette leaves are reddish
Yellow flowers are produced at the ends of dark green, nearly leafless stems. The basal rosette has lance-shaped, deeply lobed leaves. Stiff downward-pointing brown hairs grow from the base of the stem.
**Russian knapweed**

*Acroptilon repens*

*Asteraceae, the sunflower family*

**CATEGORY:** Control

**BACKGROUND**

- Native to the Caucasus in southern Russia and Asia
- Toxic to horses; can cause chewing disease
- Spreads by seeds and from shoots arising from creeping roots
- Disperses less than 3 yards
- Seeds can survive at least 9 years

**DESCRIPTION:** Branched perennial up to 3 feet tall with clusters of pink to lavender-blue flowers and creeping roots

**Roots:** Dark brown to black; vertical and horizontal

**Leaves:** Basal and lower stem leaves bluish-green, oblong, pinnately lobed, and up to 6 inches long; upper stem leaves narrow, lance-shaped to linear, with or without short fine hair

**Flowers:** White, pink, or lavender-blue disk flowers on branch tips; flower head urn-shaped; bract ovate with a green base, pointed tip, and papery margin

**Seeds:** Ivory or pale-gray achenes tipped by plumes that fall off at maturity

**HABITAT:** Cultivated fields, irrigation ditches, pastures, roadsides, and disturbed areas

**SIMILAR PLANTS:** Other knapweeds lack dark creeping roots and have differently shaped bracts
Flower heads consist of greenish to straw-colored bracts with transparent tips and pink to lavender disk flowers. Early rosette leaves are elliptical to lance-shaped with wavy margins.
**Saltcedar**  
*Tamarix* sp.  
Tamaricaceae, the tamarisk family

**BACKGROUND**

- Native to Eurasia; introduced as landscape plants
- Exudes salt from foliage
- Root and stem fragments float on water for medium to long-distance dispersal; seeds disperse at least 100 yards in light wind
- Seeds remain viable less than 1 year

**DESCRIPTION:** Shrub or small tree up to 24 feet tall

**Roots:** Long taproot with lateral roots

**Leaves:** Small, scalelike, gray-green, overlapping along the stem

**Flowers:** Pale or dark pink with 5 distinct petals; inflorescence paniclelike

**Seeds:** Capsule with tuft of long hair

**HABITAT:** Streambanks, lake margins, wetlands, moist rangelands, and saline environments

**SIMILAR PLANTS:** Other saltcedar hybrids
Flowers are pale to dark pink with 5 petals. Scalelike leaves overlap the stem.
Scotch thistle
Onopordum acanthium
Asteraceae, the sunflower family

BACKGROUND
• Native to Europe; introduced as an ornamental
• Seeds disperse less than 9 feet
• Seeds survive at least 39 years

DESCRIPTION: Erect biennial up to 8 feet tall with spiny leaves and spiny-winged stems; covered with woolly gray hairs

Roots: Thick taproot

Leaves: Rosette leaves large—to 2 feet long and 1 foot wide; rosette and stem leaves alternate, broadly oval-shaped, spiny, and toothed to shallowly lobed

Flowers: Purple or occasionally white disk flowers; globe-shaped flower head up to 2 inches in diameter in groups of 2 or 3 on branch tips; spine-tipped bracts covered with short and a few cobwebby hairs

Seeds: Egg-shaped achenes mottled brown to black with rough ridges

HABITAT: Rangeland, dry pastures, roadsides, railroad rights of way, riparian areas, and disturbed areas

SIMILAR PLANTS: Other spiny thistles have flower head receptacles that lack bristles
Large, globe-shaped heads remain upright at maturity. First seedling leaves are oval to oblong. Rosette leaves are covered with white hair, giving them a blue-green color.
Small bugloss
Anchusa arvensis
Boraginaceae, the borage family

**CATEGORY:** Control

**BACKGROUND**
- Native to Europe
- Problematic in cultivated fields
- Dispersal not reported
- Seed longevity not reported

**DESCRIPTION:** Winter annual 6–24 inches tall

**Roots:** Taproot

**Leaves:** Basal rosette is withered at flowering stage; stem leaves alternate, lance-shaped, 1–2 inches long, with wavy margins and bristly hairs arising from small bumps

**Flowers:** Funnel-shaped; blue with a distinct curve in the whitish tube; in clusters at the tip of a coiled flower stem

**Seeds:** 4 nutlets per flower, each nutlet producing a seed; nutlet base has a thickened rim; 250 seeds per plant

**HABITAT:** Roadsides, disturbed areas, pastures, and cultivated fields

**SIMILAR PLANTS:** Common bugloss, a perennial, has linear leaves, hairs without swollen bases, and a floral tube without a curve
Flowers are blue, funnel-shaped, and clustered at the tip of the stem. Nutlet base has a thickened rim. Seedling leaves are elliptic to oval and covered with hairs. Bristly hairs on leaves arise from a small bump on the leaf.
Spotted knapweed
*Centauraea stoebe*
Asteraceae, the sunflower family

**CATEGORY:** Containment

**BACKGROUND**
- Native to Europe
- Potential allelopathic effects; highly competitive
- Produces up to 25,000 seeds per plant
- Seeds disperse less than 9 feet or long distances if ingested by or attached to animals
- Seeds remain viable for more than 8 years

**DESCRIPTION:** Biennial or short-lived perennial with branched stems; up to 3 feet tall

**Roots:** Sturdy taproot

**Leaves:** Rosette leaves deeply lobed; stem leaves alternate, deeply pinnately lobed, covered with short grayish hairs

**Flowers:** White or pink-purple disk flowers solitary on branch tips; flower head ovoid; bract below flower has comblike fringed margin with black tip

**Seeds:** Dark brown to tan achenes tipped by plumes

**HABITAT:** Rangelands, dry meadows, pastures, roadsides, sandy or gravelly floodplains

**SIMILAR PLANTS:** Other knapweeds with fringed or comb-like bracts; meadow knapweed and bachelor’s buttons; hoary aster has ray flowers and bracts that bend downward
Flower heads are surrounded by black-tipped bracts. Rosette leaves are deeply lobed.
Squarrose knapweed
Centaurea triumfetti
Asteraceae, the sunflower family

CATEGORY: EDRR

BACKGROUND
• Native to eastern Mediterranean area
• Dispersal not reported; likely similar to spotted knapweed
• Seed longevity not reported

DESCRIPTION: Perennial; 1½–3 feet tall with woody base

Roots: Stout, long taproot

Leaves: Basal and lower leaves deeply pinnately lobed; upper leaves linear

Flowers: 4–8 rose to purple disk flowers on branched stems; central spine on bract subtending flower curves downward

Seeds: Seeds pale brown, 1–4 per head; seed heads fall off at maturity

HABITAT: Grasslands; rangeland; dry, disturbed areas; adapted to drought and cold temperatures

SIMILAR PLANTS: Diffuse knapweed floral bract tip does not curve downward and its flowers are typically white to cream
Flowers are rose to purple. The center spine on the bract curves downward. First seedling leaves are oval to spatula-shaped. Upper stem leaves are linear.
**Syrian beancaper**
*Zygophyllum fabago*
Zygophyllaceae, the caltrop family

**BACKGROUND**
- Native to the Syrian desert and Mediterranean region
- Disperses short distances via creeping roots; seed dispersal not reported
- Longevity not reported

**DESCRIPTION:** Bushy perennial up to 1½ feet tall with creeping roots and stems that are branched from a woody crown

**Roots:** Stout taproot with creeping lateral roots

**Leaves:** Opposite, compound, with 1 pair of opposite oval leaflets; leaflets succulent, waxy, up to 1 inch long

**Flowers:** Yellow to white or yellow to salmon; with pinkish veins; 5-petaled; up to ¾ inch across, in the leaf axils singly or in pairs

**Seeds:** In oblong, 5-angled, ribbed capsules; seeds gray, up to ⅛ inch in length

**HABITAT:** Deserts, dry grasslands, roadsides, and disturbed areas

**SIMILAR PLANTS:** None
Oblong capsules contain the seeds. Paired leaflets give the leaf a Y-shaped appearance.
**Tall hawkweed**  
*Hieracium piloselloides*  
Asteraceae, the sunflower family  

**CATEGORY:** EDRR

**BACKGROUND**  
- Introduced to the U.S. from Europe  
- Dispersal likely similar to orange and yellow hawkweeds (seeds move at least 250 yards in wind)  
- Longevity not reported

**DESCRIPTION:** Perennial up to 2 feet tall; contains milky sap (latex) in stems and leaves

**Roots:** Fibrous; lacks stolons and rhizomes

**Leaves:** Basal leaves smooth or very sparsely hairy, narrow, lance-shaped, and tapering to the base; flowering leafless stem

**Flowers:** Yellow, dandelionlike, with ray flowers only; flower stalk is long with open flower clusters

**Seeds:** Achenes with tuft of hairs

**HABITAT:** Moist grasslands and meadows to open forest

**SIMILAR PLANTS:** Other yellow-flowered hawkweeds; other invasive hawkweeds have stolons and rhizomes; difficult to distinguish from native hawkweeds
Flowers are yellow, dandelion-like, and arranged in open clusters. Sparsely hairy, almost smooth leaves occur at the base of the stem.
Tansy ragwort

*Senecio jacobaea*

Asteraceae, the sunflower family

**CATEGORY:** Containment

**BACKGROUND**
- Introduced from Eurasia
- Toxic to humans and livestock
- Seeds disperse at least 250 yards in wind
- Seeds remain viable for up to 15 years

**DESCRIPTION:** Biennial or short-lived perennial up to 4 feet tall with flowering stems that branch near the top

**Roots:** Taproot and lateral roots

**Leaves:** Dark green and smooth on upper leaf surface and covered with white cobwebby hairs on lower surface; rosette leaf margins ragged/ruffled and toothed to deeply pinnately lobed 1–2 times, to 8 inches long; lower leaves stalked, 8 inches long; upper leaves alternate, small, and without a stalk

**Flowers:** Daisylike with ray and disk flowers; yellow with light brown centers; many heads ¾ inch across; heads in dense, flat-topped clusters on branch tips

**Seeds:** Ribbed light-brown achenes with white hairlike plume

**HABITAT:** Pastures, riparian areas, forests, roadsides

**SIMILAR PLANTS:** Common tansy flowers lack showy yellow ray petals; common groundsel has toothed, deeply lobed leaves that are smaller than tansy ragwort’s
Yellow daisylike flowers occur in dense clusters. Leaves are deeply pinnately dissected and appear ruffled.
Variable-leaf-milfoil
Myriophyllum heterophyllum
Haloragaceae, the watermilfoil family

BACKGROUND
• Native to the U.S.
• Dense mats can congest waterways; dense submersed stands compete with other native vegetation
• Reproduces by seed and by plant fragmentation
• Ducks may disperse seeds and foliage over long distances

DESCRIPTION: Perennial; similar to Eurasian watermilfoil

Roots: Rooted in sediment; fibrous roots with rhizomes; turions occur on rhizomes or at base of stem

Leaves: In whorls of 4–6; submersed leaves featherlike, 0.75–2.5 inches long, 0.75–1.5 inches wide, and with 8–18 leaf segments; emerged leaves stiff, serrated, and up to 1.25 inches long and 0.1–0.5 inches wide

Flowers: 1.16–1.8 inches long with 4 reddish, oval petals; in spikes emerging up to 6 inches above the water surface

Seeds: Fruits are 0.05 inches to 0.15 inches long and nearly round; 4 seeds, one in each chamber; chambers are round or with two upward-pointing keels

HABITAT: Water up to 8 feet deep with muck substrates or silt-covered, sandy bottom sediments

SIMILAR PLANTS: Other native and introduced milfoils
Flowering sections of stems emerge from the water. Flowers are supported on thickened reddish stems. Leaves are segmented like Eurasian watermilfoil.
Vipers bugloss
_Echium vulgare_
Boraginaceae, the borage family

**CATEGORY:** Control

**BACKGROUND**
- Native to southern Europe; introduced as a garden plant
- Toxic alkaloids cause liver damage; especially toxic to horses and pigs
- Dispersal not reported
- Seeds remain viable at least 3 years

**DESCRIPTION:** Winter annual or biennial up to 3 feet tall

**Roots:** Taproot with lateral roots

**Leaves:** Basal rosette leaves stalked, oval to elliptic; stem leaves alternate, narrowly lance-shaped, covered with bristly hairs with swollen bases

**Flowers:** Purplish-blue, funnel-shaped, at the end of coiled flower stem; threadlike filaments extend from the flower

**Seeds:** 4 nutlets for each flower; nutlets blackish, 3-sided, with wrinkled surface

**HABITAT:** Disturbed sites, roadsides, pastures, and grasslands

**SIMILAR PLANTS:** Small bugloss is shorter and has a distinct curve in the floral tube; common bugloss, a perennial, has linear leaves and hairs without swollen bases
Purple to blue, funnel-shaped flowers have showy, long reddish filaments. Basal leaves are oval or elliptic, and stem leaves are lance-shaped.
BACKGROUND
• Native to Europe and North Africa; introduced into the eastern U.S. by 1869
• Sharp fruits can injure swimmers
• Reproduces by seed
• Rosettes can break from roots and float more than 100 yards with lake or stream currents
• Seed longevity is 12 years, but most seeds germinate within 2 years

DESCRIPTION: Annual that can grow to a length of 15 feet; rooted in sediment

Roots: Fibrous

Leaves: Rosette at the water surface; leaves are 1–1.5 inches long, ovoid to triangular, and have saw-toothed edges

Flowers: Four-petalled, small white flowers

Seeds: Fruits green to brown, 1.25–1.5 inches wide, with 4 sharp spines; floating black nuts do not sprout

HABITAT: Shallow ponds, lakes, and slow-moving streams generally less than 16 feet deep

SIMILAR PLANTS: None
Flowers have 4 white petals. Fruits have 4 sharp points. Dense stands shade submersed plants.
**Water hyacinth**  
*Eichhornia crassipes*  
Pontederiaceae, the pickerelweed family  

**CATEGORY:** EDRR

**BACKGROUND**  
- Introduced from South America as an aquatic ornamental  
- Considered one of the most serious aquatic weeds; difficult to control  
- Grows quickly and forms dense mats that produce high quantities of dry matter  
- Floating plants move with currents  
- Seeds remain viable at least 2 years

**DESCRIPTION:** Free-floating perennial with emergent leaves  

**Roots:** Dark, feathery; up to 3 feet long  

**Leaves:** Broadly ovate to circular, 4–8 inches in diameter; leaf stalks are bulbous and spongy  

**Flowers:** Showy; in a single spike of 8–15 flowers with 6 petals each  

**Seeds:** Egg-shaped, ribbed, in membranous capsules

**HABITAT:** Canals, ponds, lakes, reservoirs, and still and slow-moving water

**SIMILAR PLANTS:** None
Flowers are lavender, showy, and have 6 petals. Roots are black and featherlike. Free-floating plants have ovate to circular leaves with spongy, bulbous leaf stalks.
White bryony
*Bryonia alba*
Cucurbitaceae, the cucumber family

**CATEGORY:** Containment

**BACKGROUND**
- Native to Europe
- All parts of the plant are poisonous, but especially the root
- Disperses long distances by birds; check areas where birds perch
- Longevity not reported

**DESCRIPTION:** Climbing perennial vine up to 50 feet in length with tendrils

**Roots:** Thick, fleshy; resembling a large turnip

**Leaves:** Palmately 5-lobed, triangular, up to 5 inches long; rough to the touch

**Flowers:** Greenish-white, 5-petaled, ½ inch across, in clusters in the leaf axils

**Seeds:** Spherical berry, ⅛ inch in diameter, green turning to black when mature

**HABITAT:** Power poles, fence rows, and trees

**SIMILAR PLANTS:** Resembles kudzu and native clematis in its growth habit
Flowers are white tinged with green and have 5 petals. Berries can be green, turning black when mature. Stems have tendrils. Leaves are 5-lobed and triangular.
Whitetop
*Cardaria draba* (also hoary cress)
Brassicaceae, the mustard family

**CATEGORY:** Containment

**BACKGROUND**
- Introduced from Eurasia
- Disperses short distances by creeping roots; seeds disperse long distances in flowing water
- Seeds remain viable for about 4 years

**DESCRIPTION:** Perennial up to 2 feet tall

**Roots:** Creeping horizontal roots and vertical roots; vertical roots can reach to depths of 6 feet

**Leaves:** Alternate, gray-green, lance-shaped, surfaces sparsely to densely hairy, margins entire or toothed; lower leaves are stalked; upper leaves have 2 lobes clasping the stem

**Flowers:** Numerous, white, 4-petalled, ¼-inch across; in dense, nearly flat-topped to rounded clusters at the top of each stem

**Seeds:** In upside-down heart-shaped, often 2-lobed pods; seeds small, flat, reddish brown, 2 per pod

**HABITAT:** Cultivated fields, rangeland, pastures, roadsides, and disturbed sites

**SIMILAR PLANTS:** Lens-podded whitetop has flat, round seed pods; hairy whitetop has globe-shaped seed pods and generally smaller leaves covered with dense hairs
Numerous white flowers give the plant a white, flat-topped appearance. First seedling leaves are ovate to oblong with slightly wavy margins. Leaves are grayish green, arrowhead-shaped, and clasp the stem.
**Yellow devil hawkweed**

*Hieracium glomeratum*

Asteraceae, the sunflower family

**CATEGORY:** EDRR

**BACKGROUND**
- Introduced to the U.S. from Europe
- Increases with overgrazing
- Dispersal likely similar to orange and yellow hawkweeds (seeds move at least 250 yards in wind); short-distance dispersal by root buds

**DESCRIPTION:** Perennial up to 2 feet tall; broken stems and leaves exude milky juice

**Roots:** Fibrous; lacks stolons and rhizomes

**Leaves:** Basal leaves with short stiff hairs on both sides and a flowering leafless stem; leaves narrow, lance-shaped and tapering to the base

**Flowers:** Yellow ray flowers similar to dandelion’s

**Seeds:** Achene with tuft of hairs

**HABITAT:** Moist grasslands, open fields, mountain meadows, and forest clearings

**SIMILAR PLANTS:** Other yellow-flowered hawkweeds; yellow and orange hawkweeds have stolons and rhizomes; difficult to distinguish from native hawkweeds and tall hawkweed, which lack stolons
Yellow flowers are arranged in dandelionlike heads. Leaves have short stiff hairs, giving the leaves a rough texture. Leaves occur only at the base of the flowering stem.
Yellow flag iris
*Iris pseudacorus*
Iridaceae, the iris family

**CATEGORY:** Containment

**BACKGROUND**
- Native to the Mediterranean region
- Often grown as an ornamental
- Reproduces from rhizomes and seed
- Likely able to move along streams more than 100 yards per year
- Seeds have increased germination after fire

**DESCRIPTION:** Perennial; mature plant less than 4 feet tall; can survive drought periods of longer than 3 months

**Roots:** Roots grow 5–15 inches in length with stout rhizomes 0.25–1.5 inches in diameter

**Leaves:** Basal leaves are erect and the upper part of the leaf arches; leaves are flattened and 3–4 feet long

**Flowers:** Large, pale to deep yellow flowers have 3 large sepals that look like petals and 3 small petals; on stalks up to 4 feet high with several flowers per stalk

**Seeds:** Green, 3-angled, cylindrical fruit capsule up to 4 inches long contains flat, brown seeds

**HABITAT:** Wetlands, edges of ponds, irrigation ditches, and slow moving streams up to 10 inches deep

**SIMILAR PLANTS:** None
Fruits are cylinder-shaped and can be 4 inches long. Short, fleshy rhizomes create dense clumps of plants. Forms dense stands in wet areas. Grows along waterways, including irrigation ditches.
Yellow floating heart
*Nymphoides peltata*
Menyanthaceae, the buckbean family

**BACKGROUND**
- Introduced as an ornamental in landscape water features
- Forms dense infestations that reduce boating and fishing opportunities
- Reproduces from stem fragments and seed
- Dispersal is typically less than 100 yards
- Seed viability is not known

**DESCRIPTION:** Perennial with stout, ropelike stems

**Roots:** Adventitious roots in sediment

**Leaves:** Dark green and shiny with a wavy margin, heart-shaped base, and overall oval leaf shape; alternate along the stems and opposite on flowering stalks

**Flowers:** Yellow, 1.2–2 inches in diameter, with 5 petals; clustered in groups of 2–5 on stout stalks about 3 inches above the water surface

**Seeds:** Fruit are 1 inch long with numerous seeds

**HABITAT:** Ponds and lakes

**SIMILAR PLANTS:** Native yellow water lilly
Flowers are yellow with 5 petals.
BACKGROUND
• Native to Europe; introduced as an ornamental
• Seeds disperse more than 250 yards; short-distance dispersal by means of rhizomes, stolons, and root buds
• Longevity not reported

DESCRIPTION: Perennial up to 2 feet tall; hairy with yellow, dandelionlike flowers; contains a white milky sap

Roots: Fibrous roots; also has rhizomes and stolons

Leaves: Basal rosette hairy, oblong-elliptic to lance-shaped, with smooth margins; stems covered with black hairs, leafless, occasionally with a small leaf near the midpoint

Flowers: Yellow, in dense to open clusters; bracts below flowers covered with glandular and black hairs

Seeds: Dark brown to black, ribbed, tipped with white hairlike plumes

HABITAT: Meadows, rangelands, pastures, and open forest

SIMILAR PLANTS: Other yellow hawkweeds; native hawkweeds lack stolons
Bright-yellow dandelionlike flowers occur on nearly leafless stems. Plants produce a basal rosette of leaves.
Yellow starthistle
_Centaurea solstitialis_
Asteraceae, the sunflower family

**CATEGORY:** Containment

**BACKGROUND**
- Native to the Mediterranean region and Asia
- Toxic to horses, causing “chewing disease”
- Seeds disperse less than 5 yards unless attached to animals
- Seeds remain viable up to 12 years

**DESCRIPTION:** Winter annual with winged stems; up to 6 feet tall

**Roots:** Taproot to soil depths of 6 feet

**Leaves:** Grayish to bluish-green; basal rosette leaves deeply lobed to the midvein, lobes pointed with toothed to wavy margins, terminal lobe triangular, upper and lower surfaces covered with fine, cobwebby and short, stiff hairs; stem leaves alternate, mostly linear or narrowly oblong; lower stem leaves sometimes lobed

**Flowers:** Bright yellow disk flowers; bracts with sharp, long spines subtend the flowers; flower heads solitary on stem tips

**Seeds:** Glossy achenes of 2 types: tipped with plume and not plumed

**HABITAT:** Canyon grasslands, rangelands, pastures, cultivated fields, roadsides, and disturbed sites

**SIMILAR PLANTS:** None
Flowers have yellowish spines at the base of the flower head. First seedling leaves are oblong to spatula-shaped. Basal rosette leaves are entire when young, pinnately lobed when older. Stem and leaves are dull green and covered with fine woolly hairs. Leaves extend down the stem, making it appear winged.
**Yellow toadflax**  
*Linaria vulgaris*  
Scrophulariaceae, the figwort family

**CATEGORY:** Containment

**BACKGROUND**  
- Introduced from Europe as a garden ornamental  
- Produces a poisonous glucoside that may be harmful to livestock  
- Disperses short distances by means of creeping roots, less than 9 feet from seeds  
- Longevity not reported

**DESCRIPTION:** Perennial up to 3 feet tall with erect stems, creeping roots, and showy flowers

**Roots:** Vertical and creeping lateral roots

**Leaves:** Linear, up to 2 inches long, sessile, nearly opposite to mostly spreading

**Flowers:** Elongated inflorescence; flowers bright yellow, sometimes whitish, up to 1½ inch long including spur, throat often hairy and tinged orange

**Seeds:** Black to dark brown, flat, circular, with a papery wing

**HABITAT:** Rangeland, pastures, cultivated fields, gardens, and roadsides

**SIMILAR PLANTS:** Leafy spurge contains milky latex sap; Dalmation toadflax has egg- to lance-shaped leaves that clasp the stem
Snapdragonlike flowers are orange and yellow. Leaves are pale green, alternate, narrow, and pointed.
Glossary

achene. One-seeded fruit that develops from a single ovary and does not split open to disperse the seed.

alternate. Leaves that are arranged singly up the stem, not opposite each other.

annual. Plant that germinates, flowers, seeds, and dies during one growing season.

anther. Flower structure in which pollen forms.

auricle. Lobelike structure at the collar of a grass leaf.

awn. Slender bristle at the tip of grass seed structures.

axil. The angle formed between a leaf and a stem.

basal. At the base of a plant or plant part.

biennial. Plant that germinates in one growing season, then flowers, seeds, and dies during the second.

bract. Leaflike structure at the base of flowers or leaves.

calyx. All the flower leaves together, normally green in color.

clasping leaves. Leaves that appear to wrap the leaf base around the stem.

collar. In grasses, the point where the leaf leaves the stem, resembling a shirt collar.

compound leaves. Leaves with two or more distinct leaflets.

cotyledons. The first leaflike structures that appear after germination; seed leaves.

crown. The structure formed where leaves, stems, and roots grow together.

disk flower. Tiny tubular flowers in the central portion of the flower head of certain composite plants, such as the daisy.

dissected. Deeply and repeatedly divided into smaller parts.

elliptic. Narrowly oval, broadest at the middle and narrower at the two ends.

entire. Not toothed or otherwise cut.

glumes. The two bracts surrounding a grass spikelet.

head. A group of flowers borne tightly together.
inflorescence. A group or cluster of flowers arranged on the stem; a flower cluster.

irregular flower. A flower with petals that are not uniform in shape but usually grouped to form upper and lower “lips.”

lanceolate. Lance-shaped; much longer than wide.

leaflets. Leaflike structures within a compound leaf.

ligule. The structure at the collar of a grass leaf between the sheath and the stem.

linear. Long, narrow, and slender.

lobed. Leaves having cuts into the leaf edge; deeper than toothed, but not quite compound.

margin. The edge of a leaf.

membranous. Thin and flexible, usually not green.

midrib. The center and usually most prominent vein on a leaf.

nodding. A flower that is not pointed upward, but bent downward or sidewise to the stem.

nutlets. A small nut; one of the lobes or sections of the mature fruit.

opposite. Leaves situated directly across the stem from each other.

ovate. Egg-shaped in outline.

palmate. Lobed or divided from a common point, like the fingers of a hand.

panicle. A much-branched inflorescence.

perennial. Plant that lives for more than two growing seasons.

petiole. A leaf stalk.

pinnate. With two rows of leaflets, like a feather.

plume. A hairlike or featherlike structure, often on a seed.

pubescence. The hairs on a leaf, stem, or flower.

ray flower. A straplike flower at the edge of a flower head of certain composite plants, such as the daisy; each ray flower resembles a single petal.

rhizome. A creeping, underground stem.
rosette. A circular, normally basal, clump of leaves.

sagittate. Arrowhead-shaped, with basal lobes directed downward.

sheath. The extension of leaf tissue surrounding a stem.

spatulate. Like a spatula in shape, with a rounded blade gradually tapering to the base.

simple leaf. One with a blade all in one piece; not compound.

spike. A narrow, nonspreading inflorescence.

spikelet. A single or group of floral structures in a grass.

spur. A hollow appendage on a flower.

stolon. A creeping stem along the surface of the ground.

subtend. To underlie so as to enclose or surround: flowers subtended by leafy bracts.

succulent. Fleshy and juicy.

taproot. A thick, central root with minimal branching.

trifoliate leaf. A leaf made of three leaflets; cloverlike.

turion. Vegetative reproductive structure.

whorled. Three or more similar structures arranged as spokes on a wheel.

Color photographs accompany descriptions of the weeds, their biology, and their habitat.

Idaho maps show each weed’s distribution by county.

PLUS Leaf shape illustrations
PLUS Poison symbol for poisonous weeds
PLUS Color-coding to indicate each weed’s noxious weed category (statewide control, statewide containment, statewide early detection and rapid response)
PLUS Ways to distinguish among easily confused plants

INCLUDES ALL THE WEEDS ON IDAHO’S OFFICIAL NOXIOUS WEEDS LIST
